The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Hewitt (4,287,912). Hewitt shows a flow control valve with flow port 13 below valve chamber 24, check ball 16, rod chamber16, adjusting rod 45, and port 42. The adjusting rod is movable to form a gap or seal against the valve, bringing rim 48 (seen as the throttle valve seat) into sealing contact with the ball (col. 3, lines 11-15). The leading (upper) edge of the ball is in the leading edge of the rod, so therefore part of the valve chamber is in the leading edge. The check valve seat is formed between the ball and the shoulder 23 ("inner peripheral surface of a peripheral wall) of the valve chamber. The ball is urged toward contact with the seat(s) by elastic spring 17.

Claims 6-7 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 39-18634 or JP 11347869. Each of the references at least one flow control valve mounted in a barrel portion which is screwed into a mounting hole of a hydraulic cylinder. In '634, passage 7 is open at a bottom surface of the bore, and the other end portion of the passage is open at a peripheral surface of the mounting hole at 6. As the leading end portion of the cylindrical case is made to approach a bottom wall of the bore, the o-ring causes the actuation port and pressure port to be partitioned, so that communication can be reestablished only by the valve.

Application/Control Number: 10/586,866

Art Unit: 3753

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hewitt in view of JP 39-18634 or JP 11347869. The Japanese references show a cylinder device with a valve in the overall housing. It would have been obvious to mount the Hewitt valve in the Hewit compressor housing as suggested by the Japanese documents to make the overall Hewitt apparatus more compact. It would have been obvious to use a cylinder type pump as such is a well known arrangement for pumps.

Applicant's arguments with respect to Ise have been fully considered and are persuasive.

Applicant's arguments filed with respect to claims 1-4 and 6-7 have been fully considered but they are not persuasive. The rejections have been expanded to answer applicant's arguments.

Application/Control Number: 10/586,866

Art Unit: 3753

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen M. Hepperle whose telephone number is 571-272-4913. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Huson can be reached on 571-272-4887. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
